

Hybrid IT Solutions for Healthcare

Connecting patients and providers with the systems and information that power healthcare delivery

Healthcare systems are under constant pressure to improve patient experience and engagement, increase care provider efficiencies, ensure regulatory compliance and meet security requirements. And all this must be done while reducing costs and investing in technologies that enable improved quality of care and patient outcomes.

OneNeck® IT Solutions understands the tremendous demands placed on healthcare providers, and we recognize the need for reliable IT applications, systems and processes. We know that IT operations must be built and managed with maximum flexibility and security to comply with the latest requirements. That's why our comprehensive, hybrid IT solutions for healthcare support best practices, mitigate costs, improve service levels and help comply with industry regulations, freeing you to focus on delivering quality care to your patients.

Our custom-tailored solutions for healthcare include:

- **Cloud & Hosting Solutions** — Healthcare organizations require 24/7/365 access to their data, desktops, applications and communications from anywhere on any device, which is why using a hybrid cloud solution is increasingly becoming a “go-to” approach for leading healthcare systems. With anytime, anywhere access to crucial information including electronic health records and care plans, caregivers can make better decisions while providing more responsive care. In addition, with access to the tools they need to be more efficient, your staff can play a vital role in controlling costs while delivering quality care.

No one has more ways to help take your critical healthcare data and applications to the cloud, and manage your business in the cloud, than we do. Whether it's a private, public or hybrid cloud environment, our experts will help you design the solution that works for your organization. We can manage your cloud on our servers in our SSAE 16 Type 2 audited, HIPAA compliant facilities, colocate your equipment in one of our data centers or set up a system on-site, whichever works best for you.

- **ERP Application Management** — With the ever-increasing demand on healthcare providers to improve the quality of patient care and operational efficiency while reducing costs and optimizing back-end operations, healthcare Enterprise Resource Planning (ERP) is more important than ever. The efficiency of back-end business functions across supply chain management, inventory management, patient relationship management, human resources, finance and billing is crucial.

Here at OneNeck, we leverage your ERP applications to improve business processes, reduce costs and provide better support for management decision-making. Whether your organization is operating with a legacy ERP system or you are looking to implement ERP for the first time, we take an agnostic approach and work with a portfolio of ERP platforms to make sure you get a hosting and application management solution that fits your needs today and well into the future.

OneNeck understands the tremendous demands placed on healthcare providers, and we recognize the need for reliable IT applications, systems and processes.

■ **Security Solutions** — A secure network is key for today's rigorous compliance standards, and at OneNeck, we know this is based on a set of best practices and experience. That is why we've developed relationships with the premier hardware and software providers in the industry. We can provide the network foundation you require to enable reliable, seamless and highly-secure data communications across your healthcare ecosystem. Whether wired, wireless or any combination of both, we can design and implement a highly secure and reliable network foundation, allowing your healthcare organization to confidently use the latest networking technologies to increase employee productivity while meeting rigorous compliance standards for data privacy and security.

Benefits of Technology in Healthcare

- Faster, more effective care by providing highly secure access to health information when and where it's needed.
- Improved patient satisfaction by making caregivers available for remote consultations and streamlining patient care processes.
- Better communication and collaboration throughout the healthcare ecosystem with highly secure wired and wireless endpoints.
- Optimized technology investments by integrating them with existing systems and applications.
- Ensured regulatory compliance with a highly-reliable and secure communication network.

■ **Collaboration Solutions** — What if you could deliver care to more people, in more places, no matter where your medical personnel are located? What if you could make it easier for patients to access providers and specialists? Now you can, with advanced communication and collaboration tools that connect people and information. Patients can now interact with a faraway specialist just by visiting their local doctor's office, or even a retail pharmacy. Doctors can diagnose and treat distant patients without traveling, and a single specialist can treat many more patients. Care can be extended to underserved, remote, and rural areas, and patients can be easily referred to other doctors or specialists.

OneNeck can help design and implement technology network solutions that enable new levels of communication and collaboration. Built on a highly-secure network of interoperable technologies, these network solutions are crafted to meet the healthcare community's unique compliance, bandwidth, stability and interoperability requirements.

■ **Managed Services** — Having the proper IT environment is only half the battle. It takes experience, knowledge and expertise to maximize its benefit for your healthcare infrastructure. From managed applications to databases, networks and servers, our team can provide you with the support to get the most out of your investment. We provide 24/7 end-user support taking the day-to-day burden off your overtaxed internal IT staff so they can focus on strategic initiatives. And, with Disaster Recovery as a Service, we can help you prepare for the unexpected whether your interruption is due to natural or man-made causes.
