

Security Services

With all the moving pieces in today's technology landscape, new security concerns continue to emerge.

Add onto that the constant threat of attacks, there is no end to the onslaught. At OneNeck® IT Solutions, we believe this makes partnering with a trusted IT security services provider a crucial business decision.

At OneNeck, our security services address the broad scope of security and compliance needs that businesses face. We have a depth of experience in assisting our customers with their security needs, and our team is made up of security experts who stay current on the emerging threats so you don't have to.

Our extended security practice addresses the broad scope of security and compliance that our customers need.

Security Assessments

A OneNeck security assessment provides an accurate understanding your organization's infrastructure to help you identify potential security risks and compliance using security best practices and PCI/HIPAA and other industry standards.

- Internal and External Vulnerability Assessments (Rapid7)
- Security Device Configuration Assessment
- Security Architecture Assessment

Application Security

OneNeck application security protects your applications from external and internal threats. And as those threats evolve, we keep your applications in compliance using best security practices.

- Web Application Security
- Secure DNS
- Secure Email
- Web Filtering

Data Center and Cloud Security

OneNeck's Data Center and Cloud Security services protect your resources within your Data Center and Cloud infrastructure from security threats.

- DC and Virtualized Security
- Virtual Firewalls, IPS, Malware

- Cloud Security
- Specific related services:
 - Data Center Security Architecture consulting including technology strategy workshops and solution development.
 - Data Center Firewall Design and Implementation for physical and virtual environments.
 - Intrusion Prevention Solution Design and Implementation.
 - Application Delivery Solution Design and Implementation, including server load balancing, geographic load balancing, SSL offload, application security and layer 4-7 firewalls.

Identity and Secure Access

Provide authorized and secure access to your network with our identity and secure access solutions.

- Device and User Identification (WHO)
- Authentication and Authorization (HOW)
- Policy Based Access (WHAT)

Let our security experts assess your current business and technical needs and provide you with comprehensive solution to your security needs.

- Specific related services:
 - Active Directory and LDAP directory services
 - PKI certificate solutions
 - 802.1x, Kerberos, RADIUS, TACACS+ authentication protocols
 - Single Sign-On (SSO), SAML, and Dual Factor Authentication

Network Security

Full end-to-end solutions from architecture, deployment to review type services related to all aspects of security including firewall, VPN and Intrusion Prevention Security.

- Network Firewalls
- VPN (Client and Site-to-Site)
- Intrusion Prevention
- Application Firewalls
- Network Security Architecture

Secure Enterprise Mobility

Enterprise mobility and Bring Your Own Device (BYOD) policies are two of the fastest growing operational and security concerns today.

- Company Asset and BYOD Device Security
- Containerization
- Application Security
- Content
- Email Security
- Secure Browsing

Security Information and Event Management (SIEM)

Know when a security threat is in progress when it happens and respond in time to protect against it. With a properly designed and implemented SIEM in place, you gain visibility into unauthorized access controls, system attacks and the overall security posture within your network. SIEM allows you to protect your networks and achieve compliance requirements with device correlation and analytics from OneNeck.

Industry Leading Expertise

Our industry security experts include Architecture and Deployment Teams with varying certifications and experience including:

- Cisco CCIEs in Security
- CCIEs in Route/Switch
- CCSPs
- GSEC
